

MYFLIX

► Play

MyFlix is a simple and user-friendly web application for managing movies. It allows users to register, log in, browse categorized movies, search titles, and save favorites. Administrators can add, edit, and delete movie entries through a dedicated dashboard.

The system is built using HTML, CSS, PHP, and MySQL, offering a responsive design and full CRUD functionality without the need for JavaScript. MyFlix demonstrates the integration of frontend and backend components to manage a personal movie library efficiently.

Future Improvements

Movie Trailer Preview:
Show a short trailer or video preview for each movie to help users decide before adding to favorites.

Movie Ratings & Reviews:
Allow users to rate and review movies to enhance engagement.

Watchlist Feature:
Let users save movies they plan to watch later.

Conclusion

The MyFlix project shows how frontend and backend can work together to build a simple movie management system. It includes key features like login, movie browsing, search, and favorites. The project improved skills in PHP, MySQL, and web design, and proved the value of building clean, user-friendly, database-driven websites.
